

Abstract

Novel β 10 polypeptides and heterodimers thereof,
and nucleic acid molecules encoding the same are
5 disclosed. The invention also provides vectors, host
cells, selective binding agents, and methods for
producing β 10 polypeptides and heterodimeric forms
thereof, specifically α 2/ β 10. Also provided for are
methods for the treatment, diagnosis, amelioration, or
10 prevention of diseases with β 10 polypeptides and α 2/ β 10
heterodimers or their respective binding agents.
